“Pencils of curves on normal surfaces”

Abstract: We study pencils of curves on normal complex surface singularities. The curves of such pencils are equisingular except a finite number of them called special curves. The non special ones are called generic curves. Using the minimal good resolution of the pencil, we determine the topology of a generic element and describe the behaviour of the special ones.

Seminario A125 de la Facultad de Ciencias
Jueves 26 de Noviembre de 2015 a las 12:30

Organiza: Grupo de Investigación SINGACOM.
