

Singularities in Geometry and Topology in honour of Sabir Gussein-Zade with occasion of his 60th birthday.
El Escorial, Madrid, October 10-16th 2010

Real symmetry and more

Norbert A'Campo¹

SUMMARY

The topology of plane curve singularities has a symmetry coming from complex conjugation. This symmetry has many consequences. We will report on Yvonne Gerber's classification of positive tree-like mapping classes and on Olivier Couture's description of strongly invertible knots.
