Singularities in Geometry and Topology in honour of Sabir Gussein-Zade with occasion of his 60^{th} birthday. El Escorial, Madrid, October $10-16^{th}$ 2010

Topological invariants and moduli spaces of Gorenstein quasi-homogeneous surface singularities

Sergei Natanzon ¹

SUMMARY

We describe all connected components of the space of hyperbolic Gorenstein quasihomogeneous surface singularities. We prove that any connected component is homeomorphic to a quotient of cell by a discrete group. This is a joint work with Anna Pratoussevitch.
